About Me

Computer Science graduate from Universitas Negeri Medan with a 3.79 GPA. As a Full-Stack Developer and Machine Learning enthusiast, I specialize in crafting robust web applications with React and Node.js while integrating predictive AI workflows using Python. My passion lies at the intersection of full-cycle software development and data-driven intelligence.

Skill

Full-Stack Web Development

React.js, Node.js, Express.js, Flask

AI & Machine Learning

Python, CNN, LIME, Model Deployment

API & Database Management

RESTful APIs, MySQL, PostgreSQL, MongoDB

Software Testing & Quality

Blackbox Testing, SUS Evaluation, Clean Code

Problem Solving & Agile Collaboration

Scrum, Technical Leadership, Adaptability

PT. BELAWAN NEW CONTAINER TERMINAL

Medan Belawan, Indonesia

IT Staff Internship

January 2025 - March 2025

Role & Responsibilities

- Provided first-line technical support and troubleshooting assistance for hardware, software, and network infrastructure across internal division operations.
- Monitored operational systems to ensure high uptime, rapid incident resolution, and adherence to performance standards.
- Supported corporate documentation workflows by systematically organizing and digitizing financial records into the enterprise information system.

Key Deliverables

- Resolved 15–20 technical incident tickets weekly covering software, operating systems, and network infrastructure while maintaining an SLA response rate above 95%.
- Digitized over 300 operational and Accounts Payable (AP) documents into a centralized database to modernize financial verification workflows.
- Accelerated operational document retrieval and lookup processes, reducing search time by up to 40%.

Tujuhebat.id

An integrated student habit-tracking ecosystem developed under the UNIMED Community Service Program (Pengabdian kepada Masyarakat) and actively implemented at SMPN 14 Kota Binjai. It connects a mobile logging app for students with a centralized web dashboard for real-time institutional monitoring.

Key Highlights

- Cross-Platform Workflow: Mobile app for student activity uploads integrated with an administrative web portal.
- Real-Time Dashboard: Centralized monitoring of daily student activities and individual habit progress.
- Visual Verification: Photo-backed submissions to ensure authentic, transparent reporting.

SMAN 18 Medan School Portal & Digital Counseling Platform

An integrated educational platform developed under the UNIMED Community Service Program (Pengabdian kepada Masyarakat) in collaboration with SMAN 18 Medan. The platform functions as both an official school information gateway and a dedicated digital counseling environment connecting students with guidance and counseling (BK) teachers.

Key Highlights

- Digital Guidance & Counseling (BK) Channel: Provides a confidential and structured platform for students to consult, schedule sessions, and communicate directly with school counselors.
- Centralized Institutional Portal: Acts as the official digital hub for school profiles, academic updates, student achievements, and campus announcements.

EcoSortAI

An AI-powered web platform designed to automate waste identification and sorting using Convolutional Neural Networks (CNN). Built with a responsive interface styled with Tailwind CSS, the application enables users to classify waste categories seamlessly through either photo uploads or real-time camera scanning.

- CNN-Powered Image Classification: Implements a Convolutional Neural Network (CNN) model to accurately identify and categorize waste types to promote proper recycling.
- Dual-Mode Visual Input: Provides flexible scanning options via static image file uploads and real-time live camera feed detection.

Klasifikasi Otomatis Berita Online dengan IndoBERT Base

An intelligent Natural Language Processing (NLP) web platform developed in collaboration with Harian Medan Pos to automate news article classification. The system integrates a fine-tuned IndoBERT language model served via a Flask backend with a responsive, modern web interface built using React.js and Tailwind CSS.

Key Highlights

- IndoBERT-Powered NLP Architecture: Leverages a fine-tuned IndoBERT model to capture Indonesian semantic nuances and automate multi-class news classification.
- Validated High Performance: Achieved an overall accuracy of 92.00% (46 of 50 test articles accurately predicted), with a Macro F1-Score of 91.52% (Weighted F1: 92.13%), Macro Precision of 91.56%, and Macro Recall of 91.68%.

Mobile Apps

Anvent

A community service initiative (Pengabdian kepada Masyarakat) delivering a mobile health companion to prevent anemia in pregnant women through automated iron supplement (TTD) tracking, pregnancy wellness tips, and healthy complementary feeding (MPASI) recipes.

- Features automated daily notification alerts and intake logs to ensure strict adherence to iron supplement routines.
- Provides evidence-based pregnancy health tips alongside practical complementary feeding (MPASI) guides to support maternal and infant nutrition.
- Developed and deployed through a dedicated community service program to deliver tangible health benefits directly to expectant mothers.

EduPredict

Developed by Team Phoenix from Universitas Negeri Medan, EduPredict is an intelligent platform powered by Machine Learning and Explainable AI (LIME) to detect early student dropout risks. By turning socio-academic data into transparent, interpretable insights, it empowers educators to deliver targeted retention interventions.

Key Highlights

- Built a machine learning classification model trained on complex socio-academic parameters, achieving an 89% accuracy score and an F1-score of 0.88 to identify students at risk.
- Designed a responsive, user-friendly interface that processes student data in real time and visualizes prediction probabilities alongside feature impact charts.
- Awarded 4th Place (Honorable Mention) at the DIMAS-TI AMLI 2024 National Research & Scientific Paper Competition for bridging AI modeling with actionable social impact in higher education

Abstract

Ineffective waste management, especially in sorting organic and non-organic waste, is a major challenge in preserving the environment due to the lack of automatic classification technology. This research aims to develop a waste classification system based on the Convolutional Neural Network (CNN) algorithm that is implemented into a website to make it easier for people to sort waste efficiently. The system is designed with an image upload feature from the user's device and real-time classification using a camera. The research

Abstrak

Pengelolaan sampah menjadi tantangan yang semakin kompleks seiring dengan meningkatnya jumlah penduduk dan aktivitas masyarakat. Salah satu masalah utama yang dihadapi adalah antrean truk sampah yang panjang di Tempat Pemrosesan Akhir (TPA), yang dapat menghambat efisiensi operasional. Penelitian ini bertujuan untuk mengembangkan sistem simulasi antrean berbasis website di TPA Terjun menggunakan metode Monte Carlo, guna mengoptimalkan pengolahan sampah dan mengurangi waktu antre. Dengan menggunakan data historis kedatangan truk sampah, simulasi ini memetakan distribusi probabilitas kedatangan truk dan waktu antrean. Hasil simulasi menunjukkan bahwa hari dengan frekuensi kedatangan truk tertinggi adalah Jumat, diikuti oleh Kamis dan Minggu, dengan jumlah rata-rata truk per hari sekitar 227 truk. Prediksi jumlah truk per minggu adalah 1.392 truk, dengan waktu antre sekitar 2 menit 24 detik per truk. Sistem ini diharapkan dapat meningkatkan efisiensi operasional dan mengurangi kemacetan antrean di TPA Terjun.

Kata kunci : monte carlo, pengelolaan sampah, distribusi probabilitas, antrean truk sampah, sistem informasi berbasis web

DEVELOPMENT OF A WEB-BASED WASTE PROCESSING QUEUE SIMULATION SYSTEM IN TPA USING THE MONTE CARLO METHOD
